COAL-GEN EUROPE™

Conference & Exhibition
1- 3 September 2009
EXPO Silesia, Katowice, Poland

With the current boom in demand for coal, providing Europe with reliable and affordable power, great investment is being made in its production and the carbon dioxide management of the industry.

COAL-GEN Europe is the premier pan-European conference and exhibition dedicated to the resurging coal-based power generation industry and the revolutionary technology that will help Europe meet its environmental challenges.

COAL-GEN EUROPE™

Conference & Exhibition
1- 3 September 2009
EXPO Silesia, Katowice, Poland

Coal will continue to play a significant role in power generation with Poland, the world's eighth largest coal producer and exporter and a major domestic generator, providing significant contribution towards Europe's demands.

Carbon dioxide management from coal is becoming increasingly important. Carbon capture and storage (CCS) is the critical enabling technology to help reduce CO2 emissions significantly while also allowing coal to meet the world's pressing energy needs.

Technologies including coal to liquid, gasification and oxygen separation all bring their opportunities for enhancing the performance of coal plants in a carbon-constrained world, whilst aiming to improve generation efficiency.

The COAL-GEN Europe conference aims to discuss the future of coal and the advances in design and technology and the need for continued investment in optimising the coal-based power stations and the raw material on which they rely.

If your company supplies products or services to the coal power generation industry, then COAL-GEN Europe is essential to reaching the key industry professionals and decision makers.
