

P&G Career Academy presents: R&D European PhD Seminar

Procter & Gamble's R&D PhD Seminar is designed to give you the opportunity to see what a typical day of a Scientist or Engineer in R&D looks like and will give you some insights into the daily challenges of the business. You will be able to experience the innovative world of our R&D organization and practise the skills needed to be successful.

You will do it first hand via a series of exercises and case studies working closely with other international students and with trainers from P&G on the following topics: applying technical knowledge, solving problems, making decisions, setting priorities, communicating ideas, working as part of a team.

You will visit one of our European Technical Centers and have ample opportunity to meet and talk with some of our scientists and engineers.

It will be hard work and a lot will be asked of you, but you will also have a lot of fun!

Would you like to learn more about Research & Development in a competitive and innovative fast-moving consumer goods business in one of the most successful companies of the world?

In 2007 we will hold two seminars: One in Egham, England March 26th-28th, and one in Schwalbach/Frankfurt, Germany April 2nd-4th.

Accommodation, meals and travel to and from the seminar are paid by the company.

Closing dates for application: Jan 31, 2007

For more details and online application: www.pg.careers.com/rdphd

Or contact: Maria Papadaki, papadaki.m@pg.com, Tel: 0032-2-2676849

*The recruitment process for Ph.D. students has two steps: 1) Online application. After your application our recruiters will evaluate your file and if positive will invite you for, 2) Interviews with our managers. Successful candidates may be invited to the Career Academy and be offered the possibility of permanent employment.. Due to the limited number of seats for the Career Academy there is going to be a reserve list of successful candidates. We are looking for excellent team-players who can make the right strategic choices to create competitive advantage and market success. Insightful analysis of complex data, and ability to integrate conclusions with intuition to build actionable business strategies and plans are also essential. More information on *What we look for* can be found at pgcareers.com → Apply to P&G → What we look for.*

Sincerely,

Maria Papadaki
