

«Surviving in harsh environments»

Micro- and nanotechnology will change your world, no matter which industry you are in, from subsea to outer space, in medical technology or process industry, enduring extreme temperatures, corrosive environments and high pressures.

Learn from the best: How micro- and nanotechnology is used to give added leverage to new product-opportunities. How pitfalls are avoided and possibilities exploited.

At COMS2012 leading industrialists, end users, manufacturers, entrepreneurs and financiers will share experiences and identify new opportunities.

COMS 2012

Where the global Small Tech community meets to drive the future

COMS brings together leaders from all over the world and every sector of industry, from high tech companies, national labs, regional development and government agencies, investment and consulting groups, market researchers, educators and students, all sharing, learning and creating partnerships in an open interactive setting. This is a powerful environment focused on accelerating commercialization activity among established and emerging micro and nano businesses.

COMS; Commercialization of Micro-nano Systems

Why attend COMS?

COMS focuses primarily on commercialization, entrepreneurship and marketable solutions, not just science and technology. It is a hands on, practical meeting to assist you in bringing your products to market, finding new business opportunities, or the perfect development partner. COMS will provide you with the information you need, in an atmosphere designed for business development and networking.

We welcome you to join us in the charming town of Tønsberg in Vestfold, Norway.
