**Conference “Modern Physical Chemistry for Advanced Materials” is devoted to the 100th anniversary of the birth of the outstanding physico-chemist Professor Nikolai Izmailov (1907-1961).**

Kharkov University has got long-standing traditions in physical chemistry. A great Russian chemist, Professor Nikolai Beketov (1827–1911) established the physico-chemical division as early as in 1864. In 1865, Beketov delivered the first course in physical chemistry. At the end of the XIX century and beginning of the XX century, Professors P. D. Khrushchov, V. F. Timofeyev, G. E. Timofeyev, and many other scientists contributed to the field of physical chemistry, mainly in solution chemistry. A number of outstanding chemists elaborated physical chemistry in Kharkov before the World War II. Among them are G. E. Mukhin, A. N. Shchukarev, I. S. Teletov, P. P. Kosakevitch, E. N. Gapon, S. S. Urazovskiy, I. N. Frantsevich, and N. A. Izmailov.

Nikolai Arkadievich Izmailov [PhD (1937), ScD, Professor (1948), Corresponding Member of the Ukrainian Academy of Sciences (1957)] headed the Department of Physical Chemistry of Kharkov State University from 1944 to 1961. All his scientific activity was connected with Kharkov University and Kharkov Pharmaceutical Research Institute.

Two main directions of scientific interests of Nikolai Izmailov were (i) the influence of the solvent on dissociation of electrolytes; (ii) statics and dynamics of sorption

from solutions. In 1938 he discovered the thin layer chromatography (together with M. Shraiber). In 1930th Izmailov investigated the possibility of application of various indicator electrodes, especially glass electrodes, in organic solvents. In 1930th – 1950th, he proposed the most detailed scheme of electrolytes dissociation in solutions, generalized the concept of unique acidity scale in different solvents, proposed several new methods for estimating Gibbs energy of ion solvation, and contributed a lot to the theory of physico-chemical analysis. Izmailov was one of the pioneers in application of radioactive indicators in physical chemistry.

Izmailov is the author of more than 270 publications; his treatise ‘Electrochemistry of Solutions’ (1959) is well known to those working in the field of solution chemistry and still is frequently cited.

31 persons got PhD degree under Izmailov’s supervision and 11 got ScD degree (A. M. Shkodin, V. N. Eremenko, V. D. Bezugliy, V. V. Aleksandrov, E. F. Ivanova, E. V. Titov, Yu. A. Krugliyak, O. M. Konovalov, V. P. Georgievskiy, V. D. Chmil, V. I. Lebed).

The Organizing Committee is grateful to the following organizations and persons, who financially supported the Conference: V. Karazin Kharkiv National University; the Alumni Association of V. Karazin Kharkiv National University; SAGMEL Incorporation; Kharkiv University graduate S. N. Goncharov; and an anonymous sponsor from Russia.
