

# Reactor Technologies for Carbon-Neutral Solar Fuels and Clean Vehicles

Athanasios G. Konstandopoulos,  
Souzana Lorentzou, Eleni Papaioannou,  
Georgia Kastrinaki & Dimitrios Zarvalis

*Aerosol & Particle Technology Laboratory, CPERI/CERTH*

# Functionalized Structured Reactors

## Emission Control Reactors

Soot nanoparticles, CO, HC, NO<sub>x</sub>

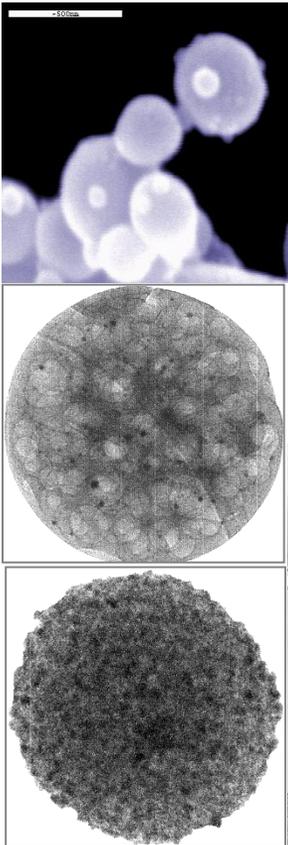

## Solar Reactors

Thermochemical processes for energy production

# Functionalized Structured Reactor Development

## (Nano)-Particle Synthesis

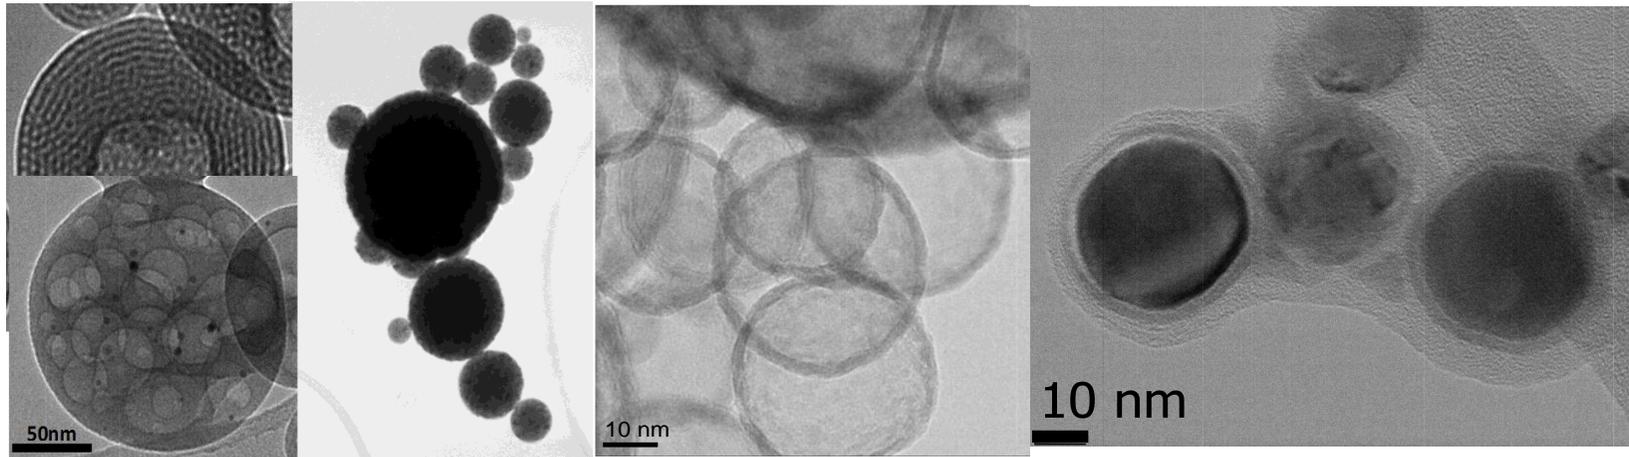

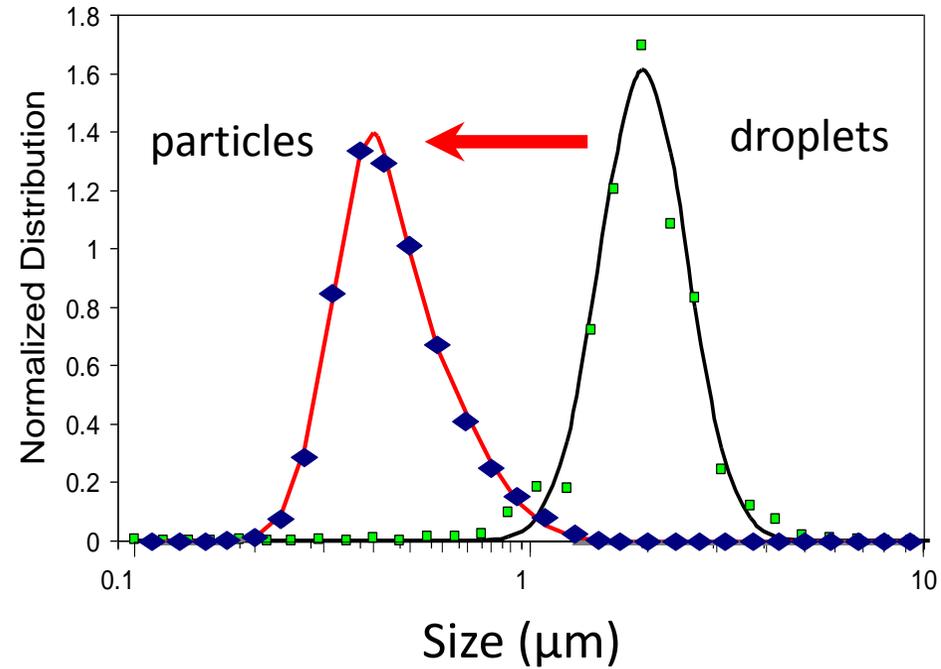

## Shaping of structured reactor bodies

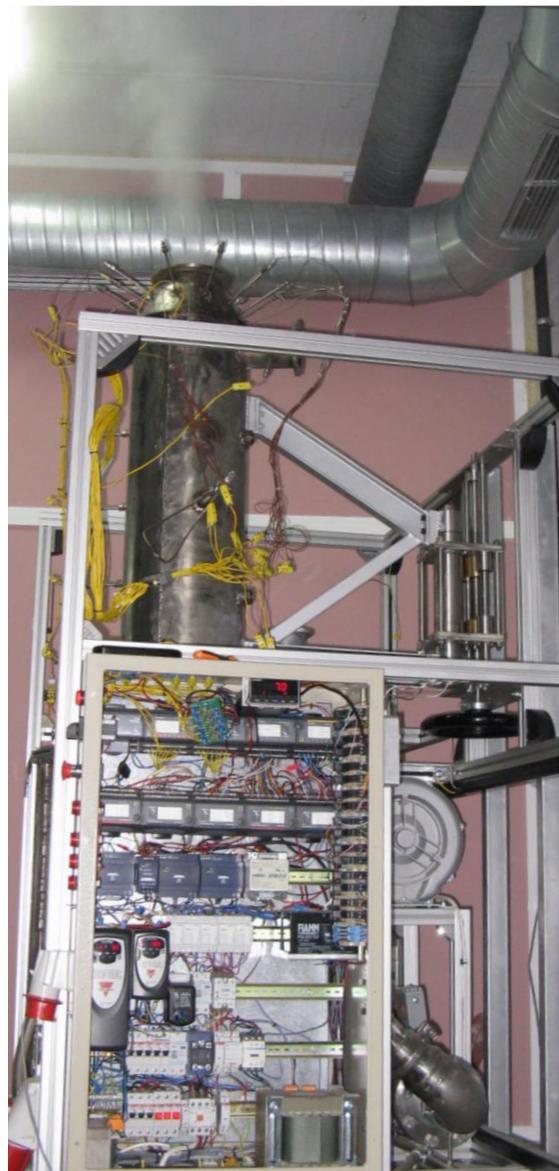

## Coating/Functionalization of structured reactors

# From Droplets to Particles with Different Morphologies/Nanostructures

# Aerosol Based Manufacturing Pilot Plant

deposition

synthesis

# Functionalizing/Coating Porous Supports

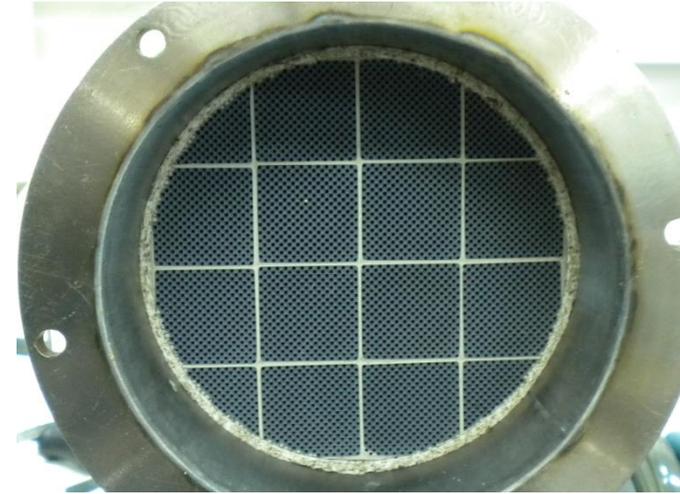

Ceramic Foam

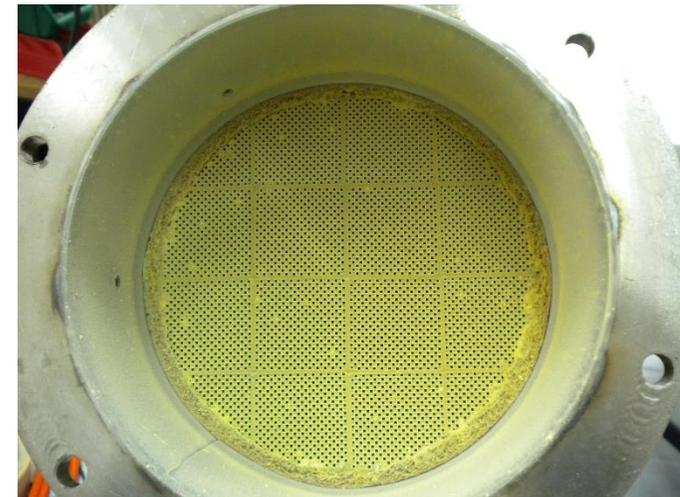

Fibrous metal

Ceramic Honeycomb

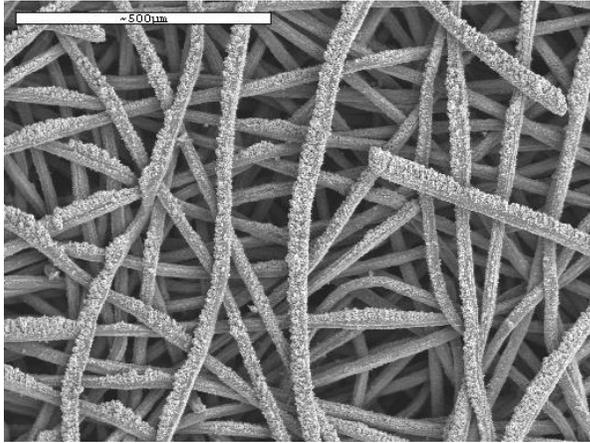

Functionalized/Coated samples

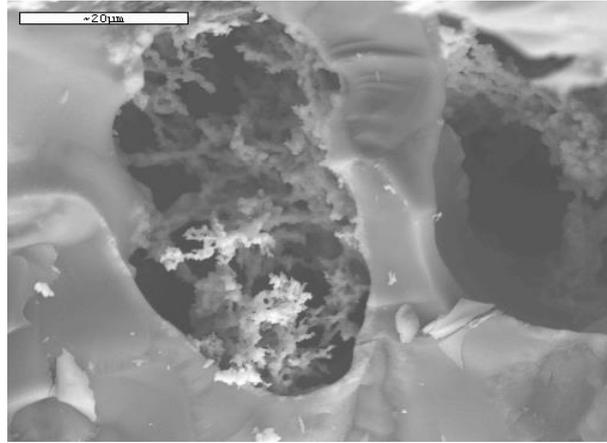

# Flexibility in Deposition Mode

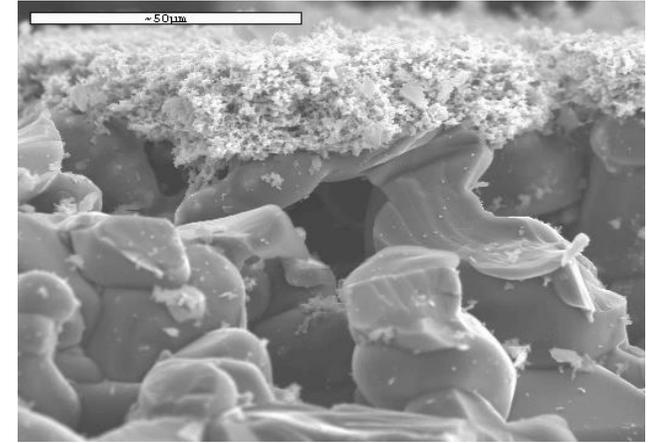

On Surface

Inside the Pores

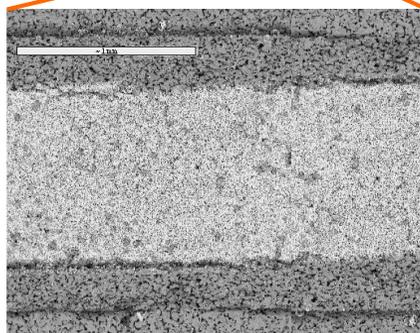

Layer

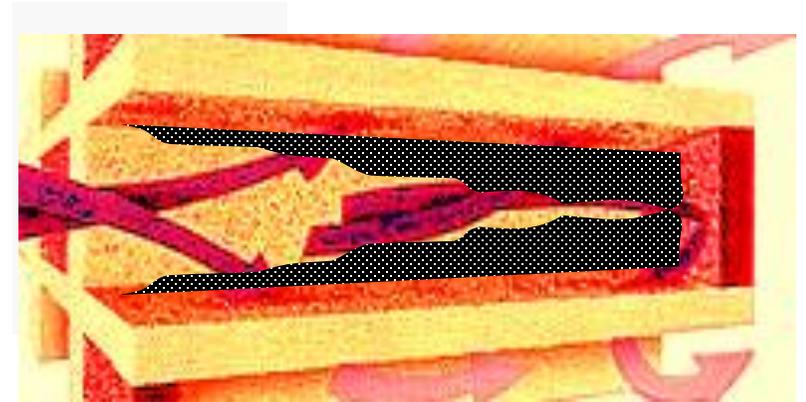

Inside Microchannels

1.5 x 150 mm

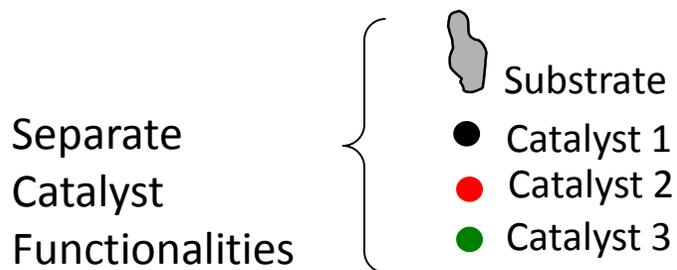

# Functions of an Emission Control Reactor (4WC)

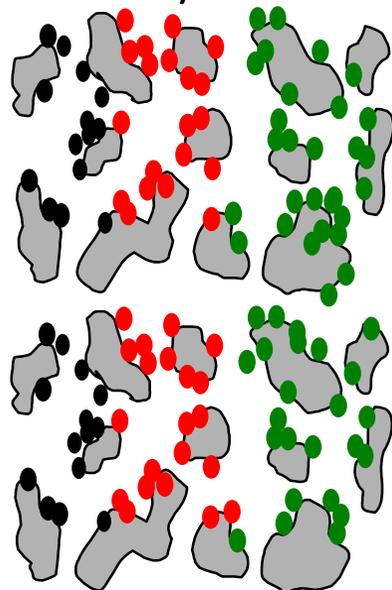

- **Nanoparticle Separation:** Filtration & Pressure Drop
- **Reactor:** Soot, CO/HC/NO oxidation, NO<sub>x</sub> reduction
- **Ash Accumulator:** Aging performance

# Adding Multiple Catalytic Functions to a Porous Wall

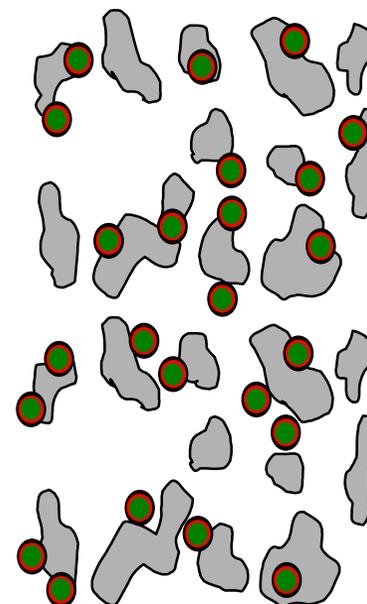

Different Catalyst Particles

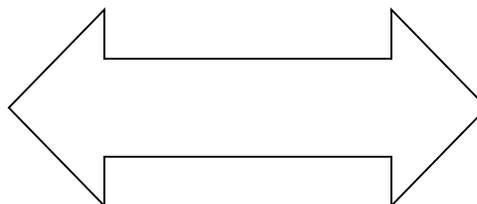

High  $\Delta P$

Multi-Functional Particles

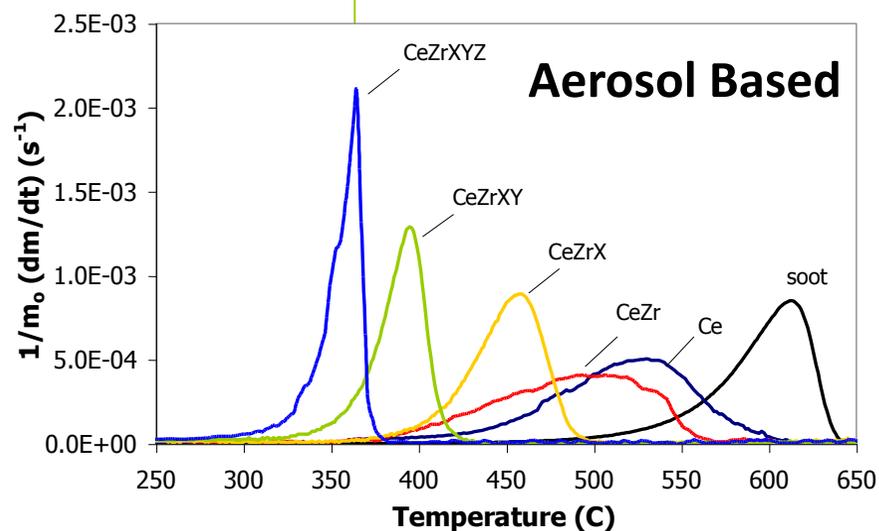

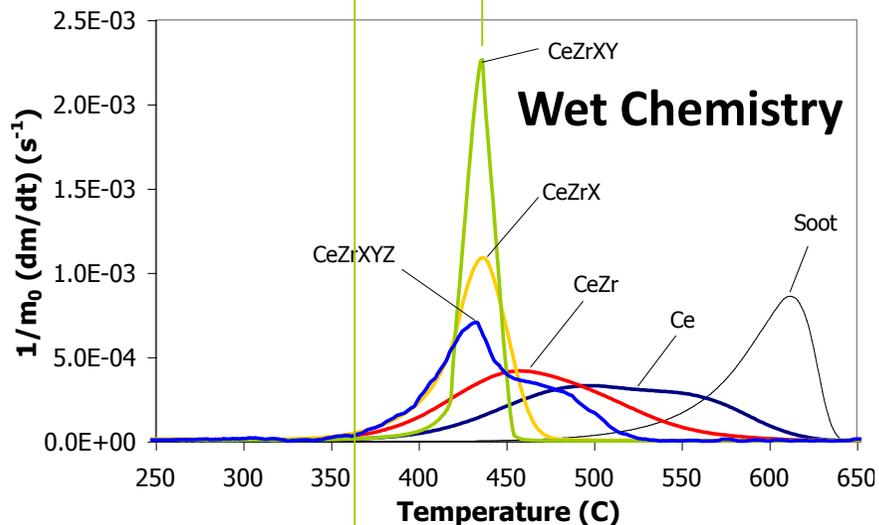

Low  $\Delta P$

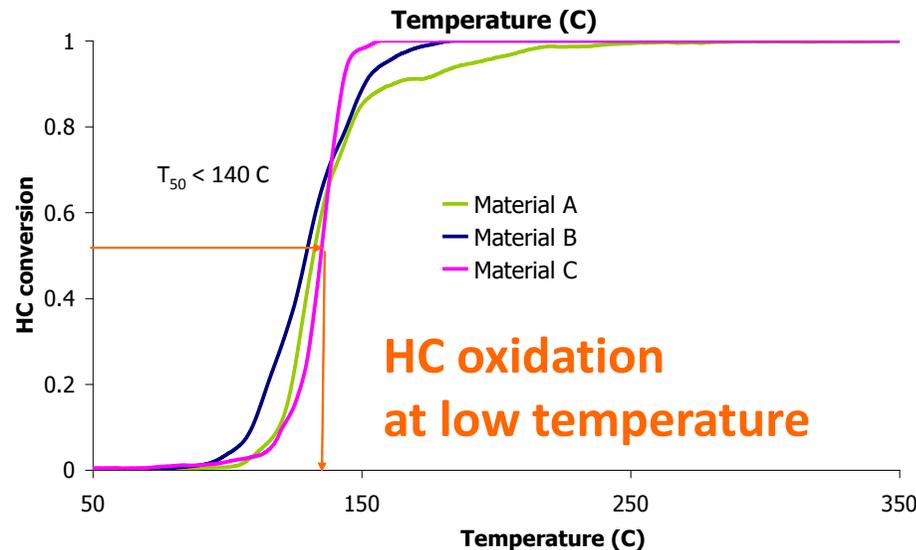

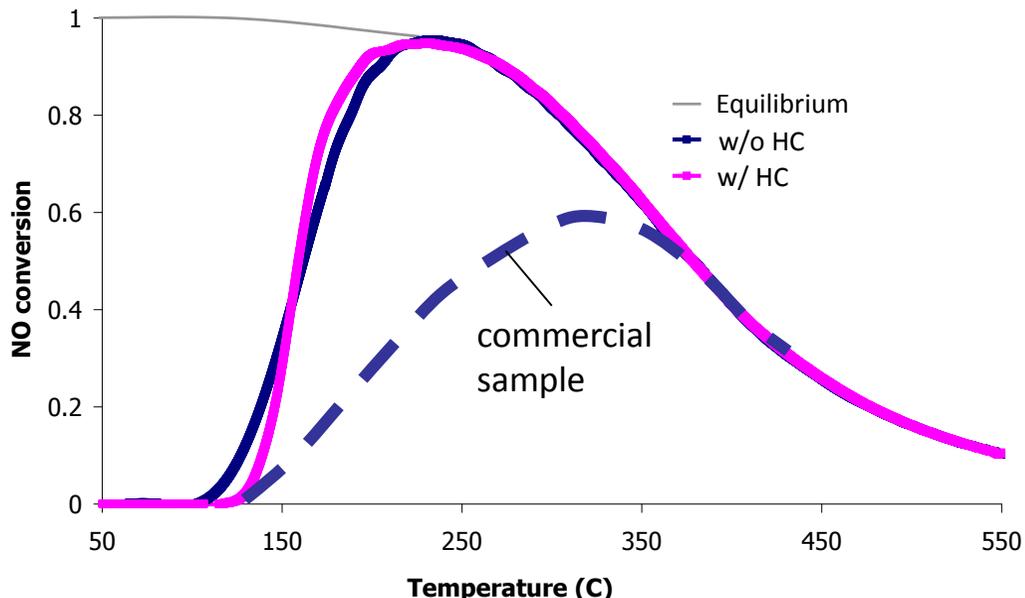

# Aerosol Synthesis of Diesel Emission Control Catalysts

## Improvement in soot oxidation

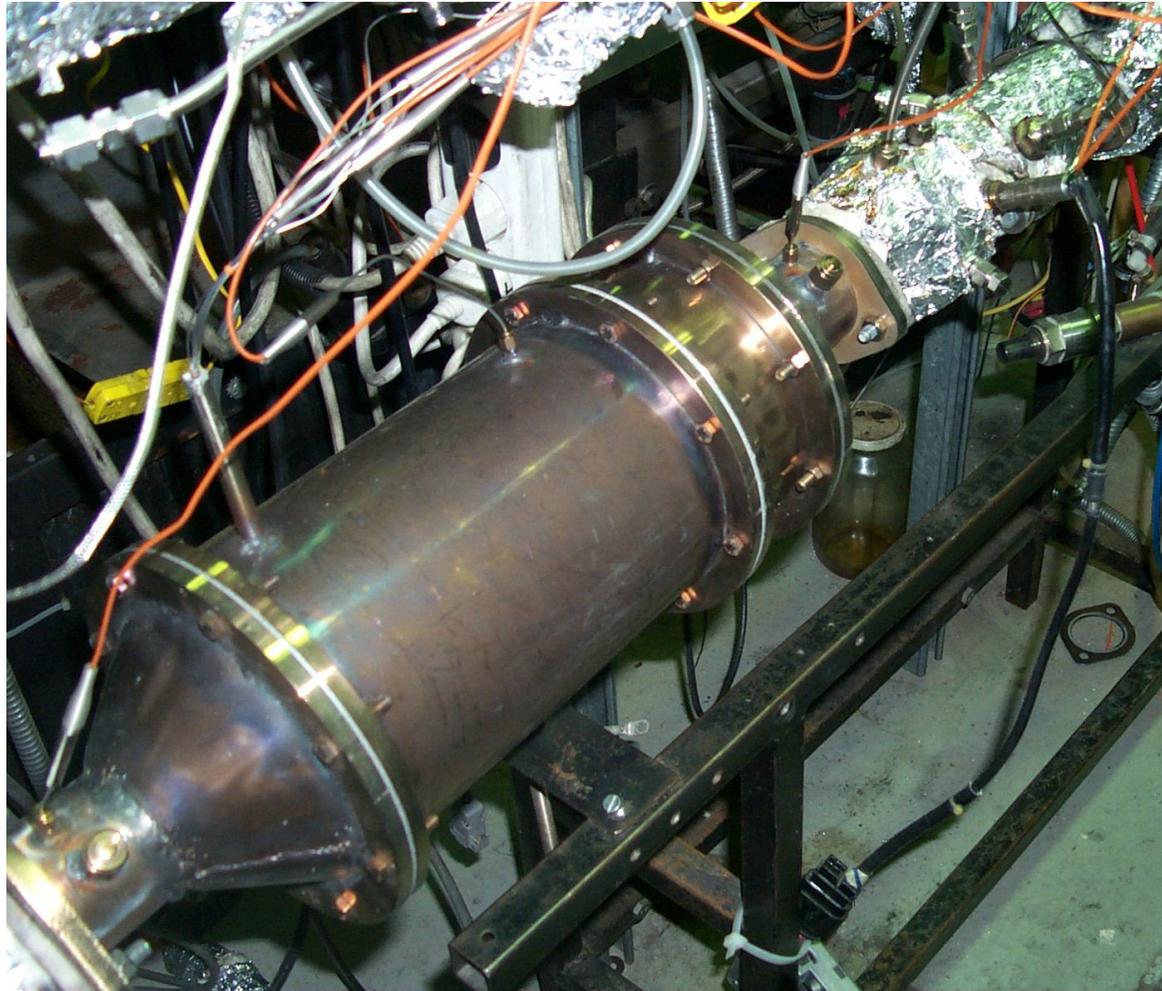

## NO to NO<sub>2</sub> oxidation unaffected by HC

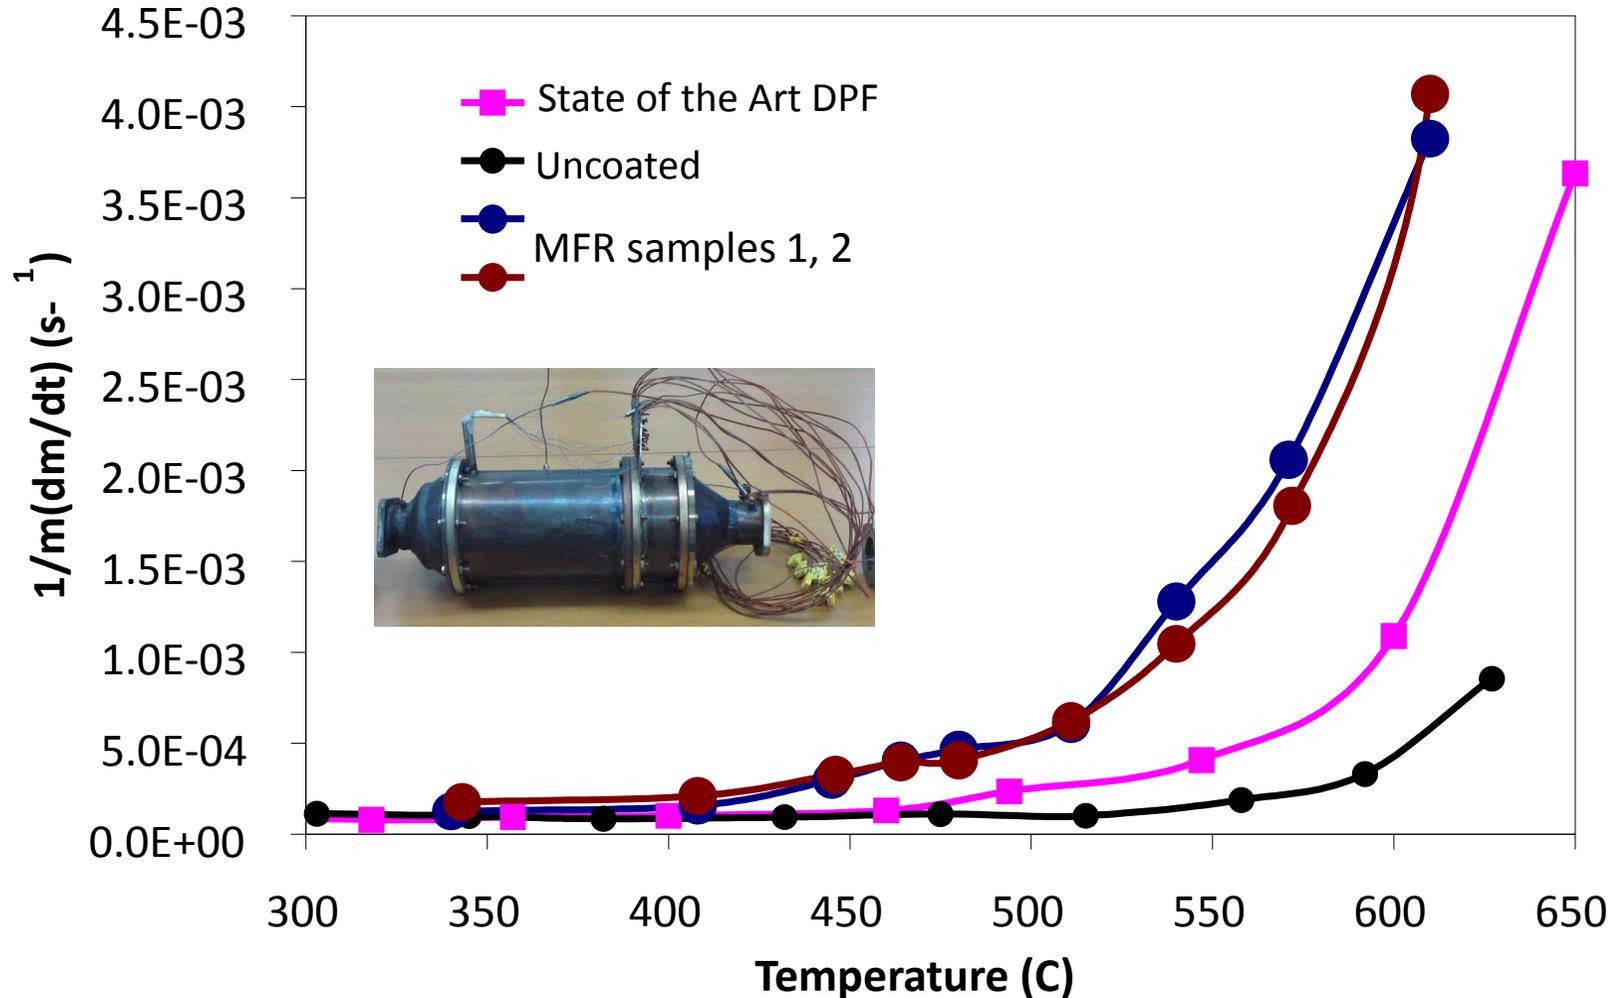

# Multi-Functional Filter-Reactor (MFR)

The MFR is a 4-way converter solution for soot nanoparticle removal and oxidation, CO and HC oxidation and NO<sub>x</sub> removal.

# MFR Assessment

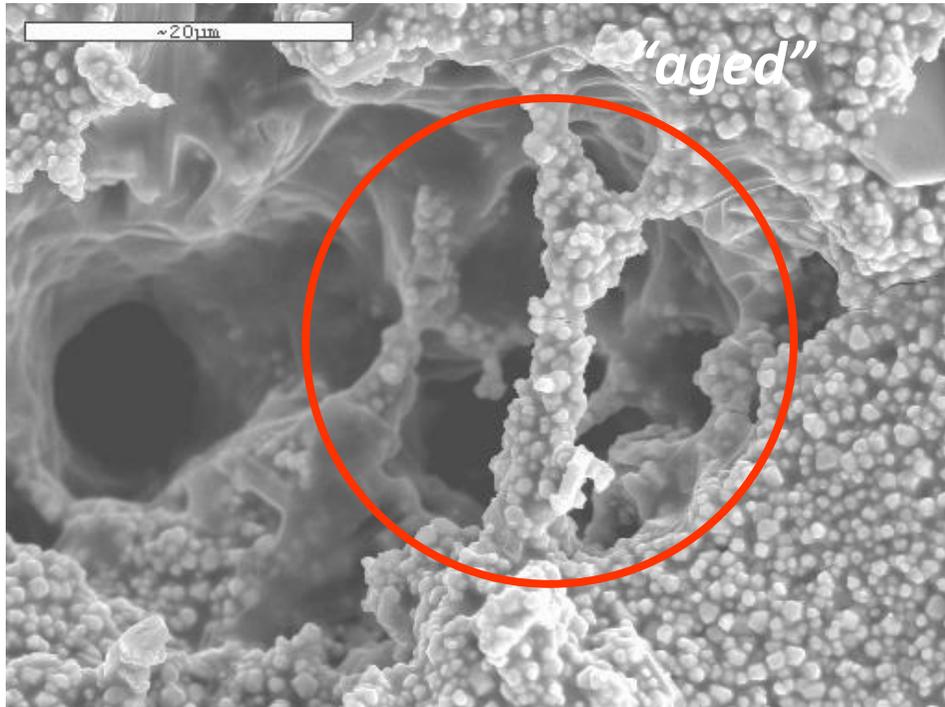

4 times higher soot oxidation rate at 550 C compared to a State of the Art DPF

# Doping for Thermal Resistance to Sintering

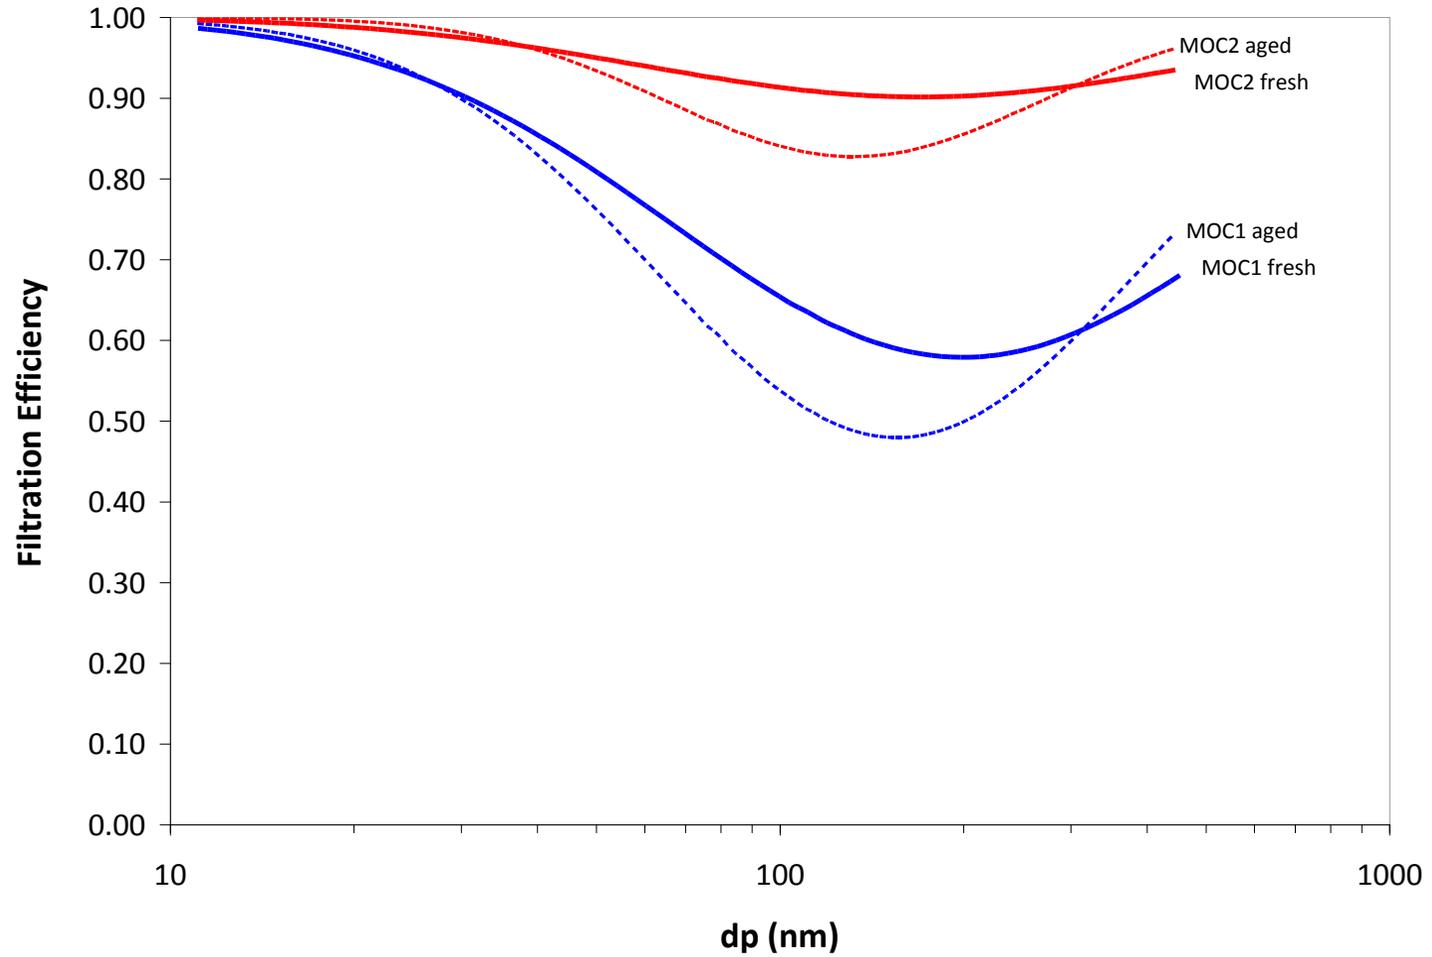

Mixed Oxide Catalyst MOC 1

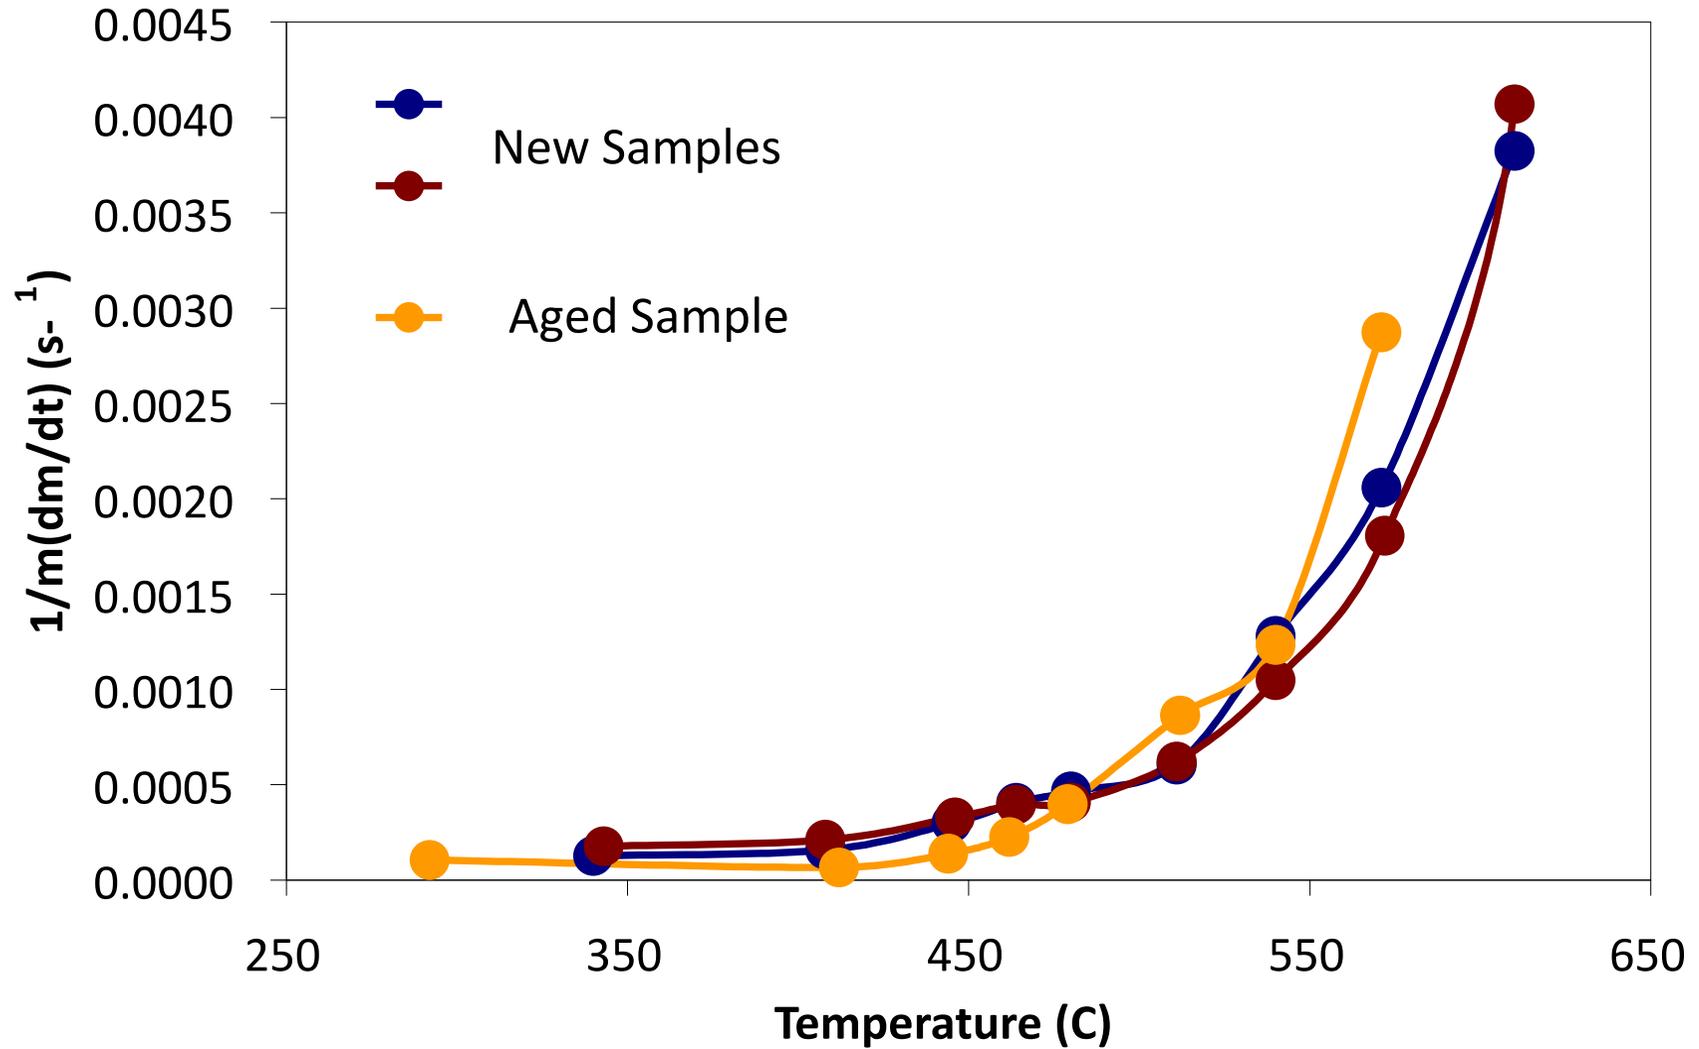

Mixed Oxide Catalyst MOC 2

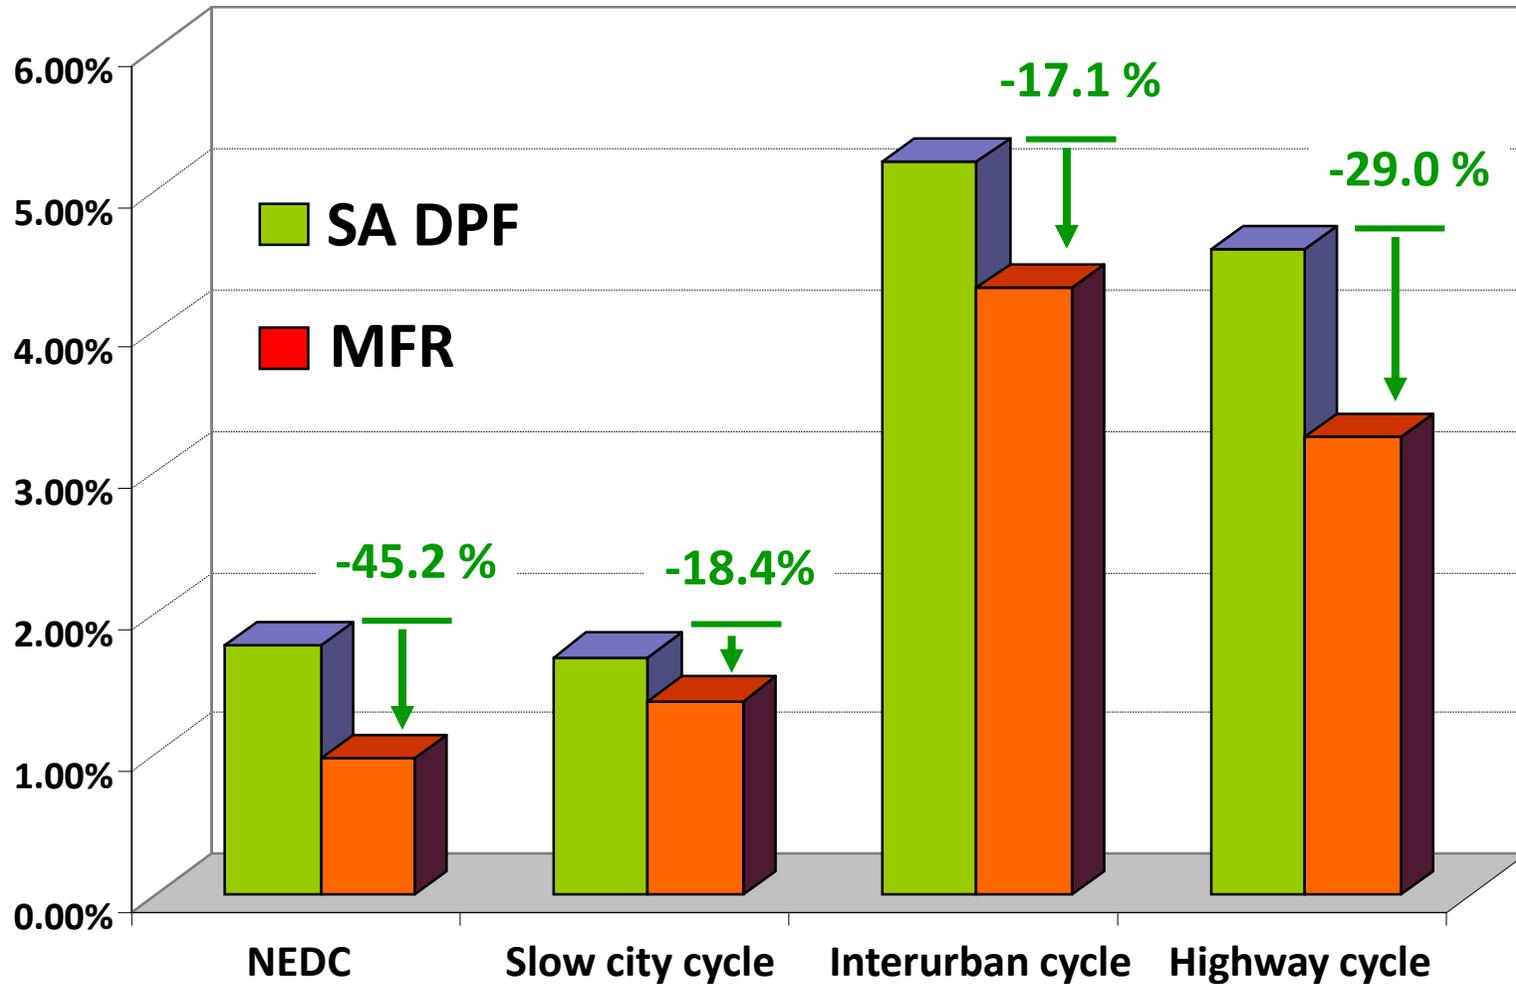

# Size specific clean filtration efficiency

# MFR Aging (equivalent to 100,000 km)

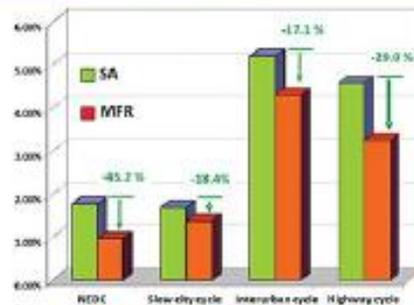

# Fuel penalty comparison for different driving cycles

# Emission Control Science & Technology

**An International Journal**

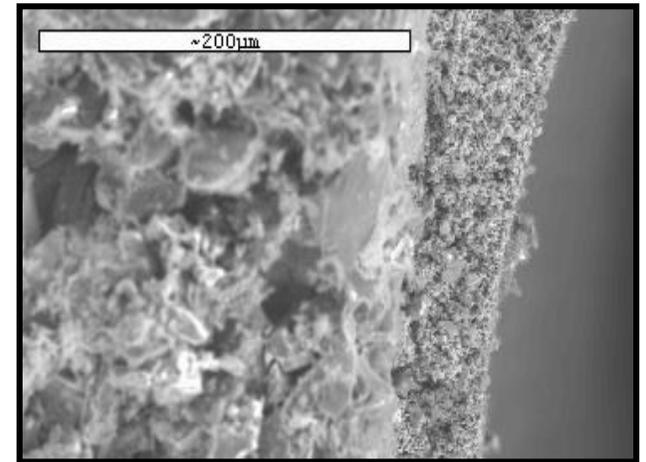

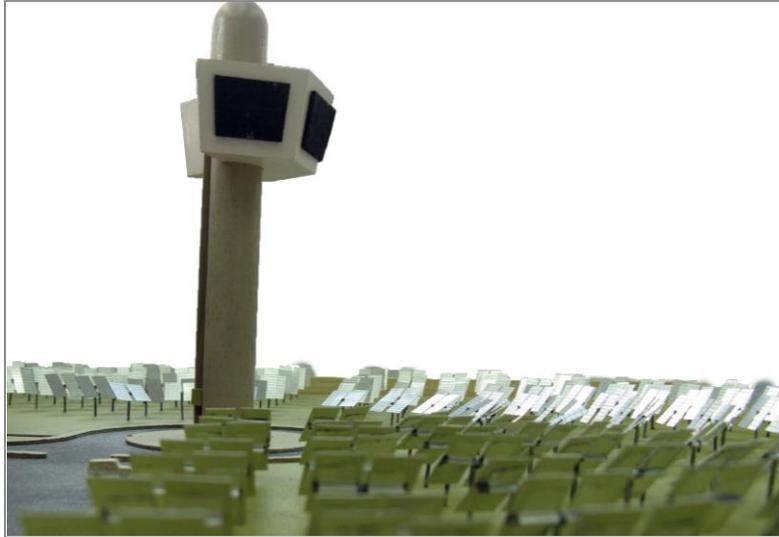

‘Emission Control Science and Technology’ is the single, authoritative outlet for all areas of emission control research, development and application related to mobile (automotive-land/air/sea transport) and stationary sources in the energy, chemical process and manufacturing industries where combustion technologies are employed.

Editors-In-Chief:

Athanasios G. Konstandopoulos

Mansour Masoudi

# Functions of a Solar Thermochemical Reactor

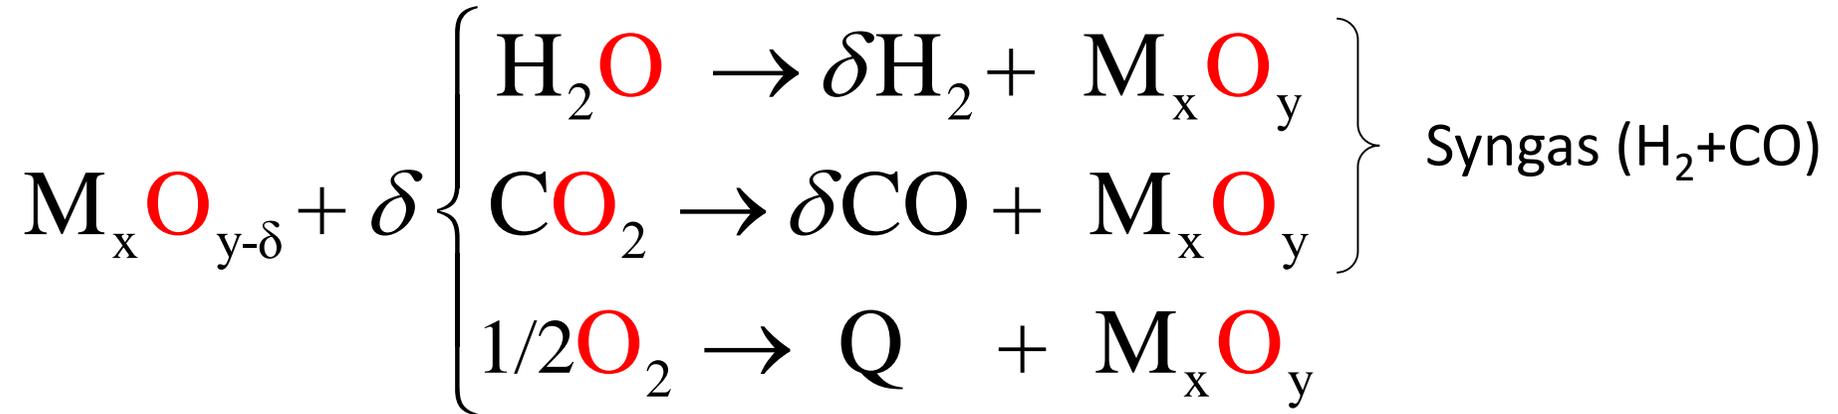

- **Volumetric Receiver:** Absorption of solar radiation/conversion into heat
- **Heterogeneous reactor:** Gas solid reactions/Catalytic reactions

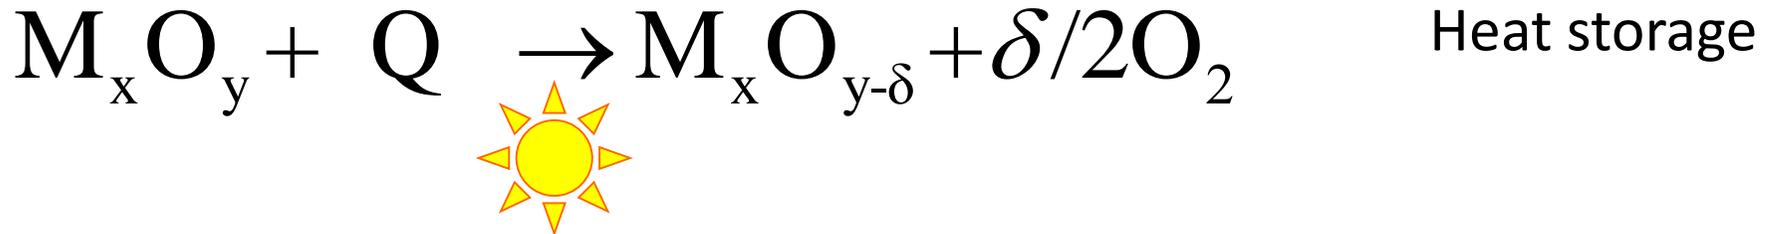

# Key Enabling Technology: Redox Materials

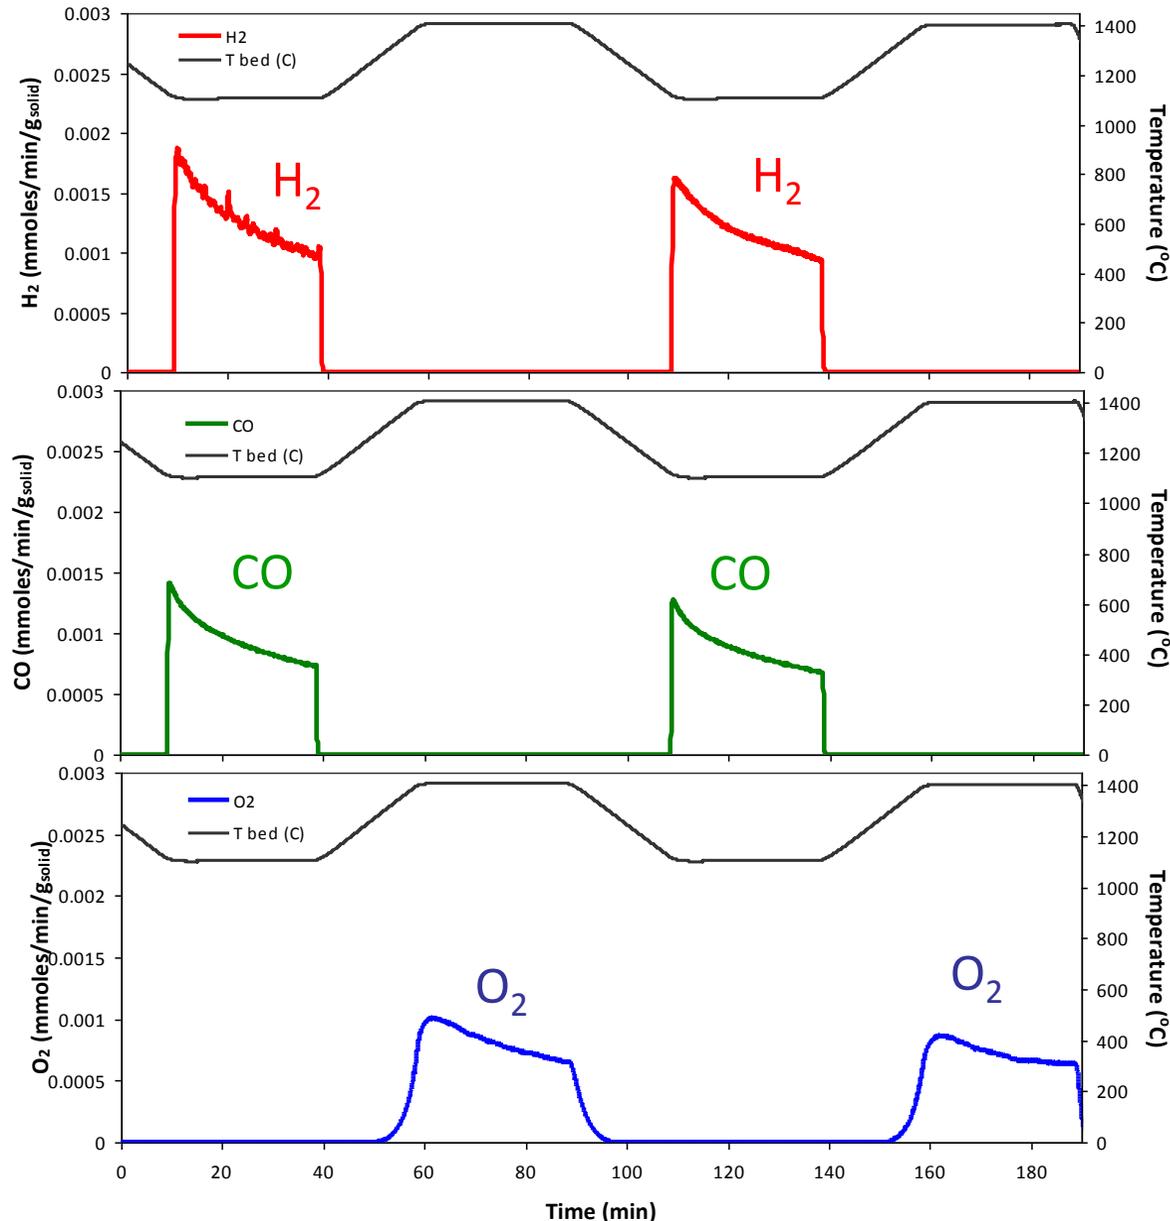

## Oxidation of reduced oxide

## Thermal reduction of oxide

# Simultaneous H<sub>2</sub>O & CO<sub>2</sub> splitting over a redox material

H<sub>2</sub>O splitting

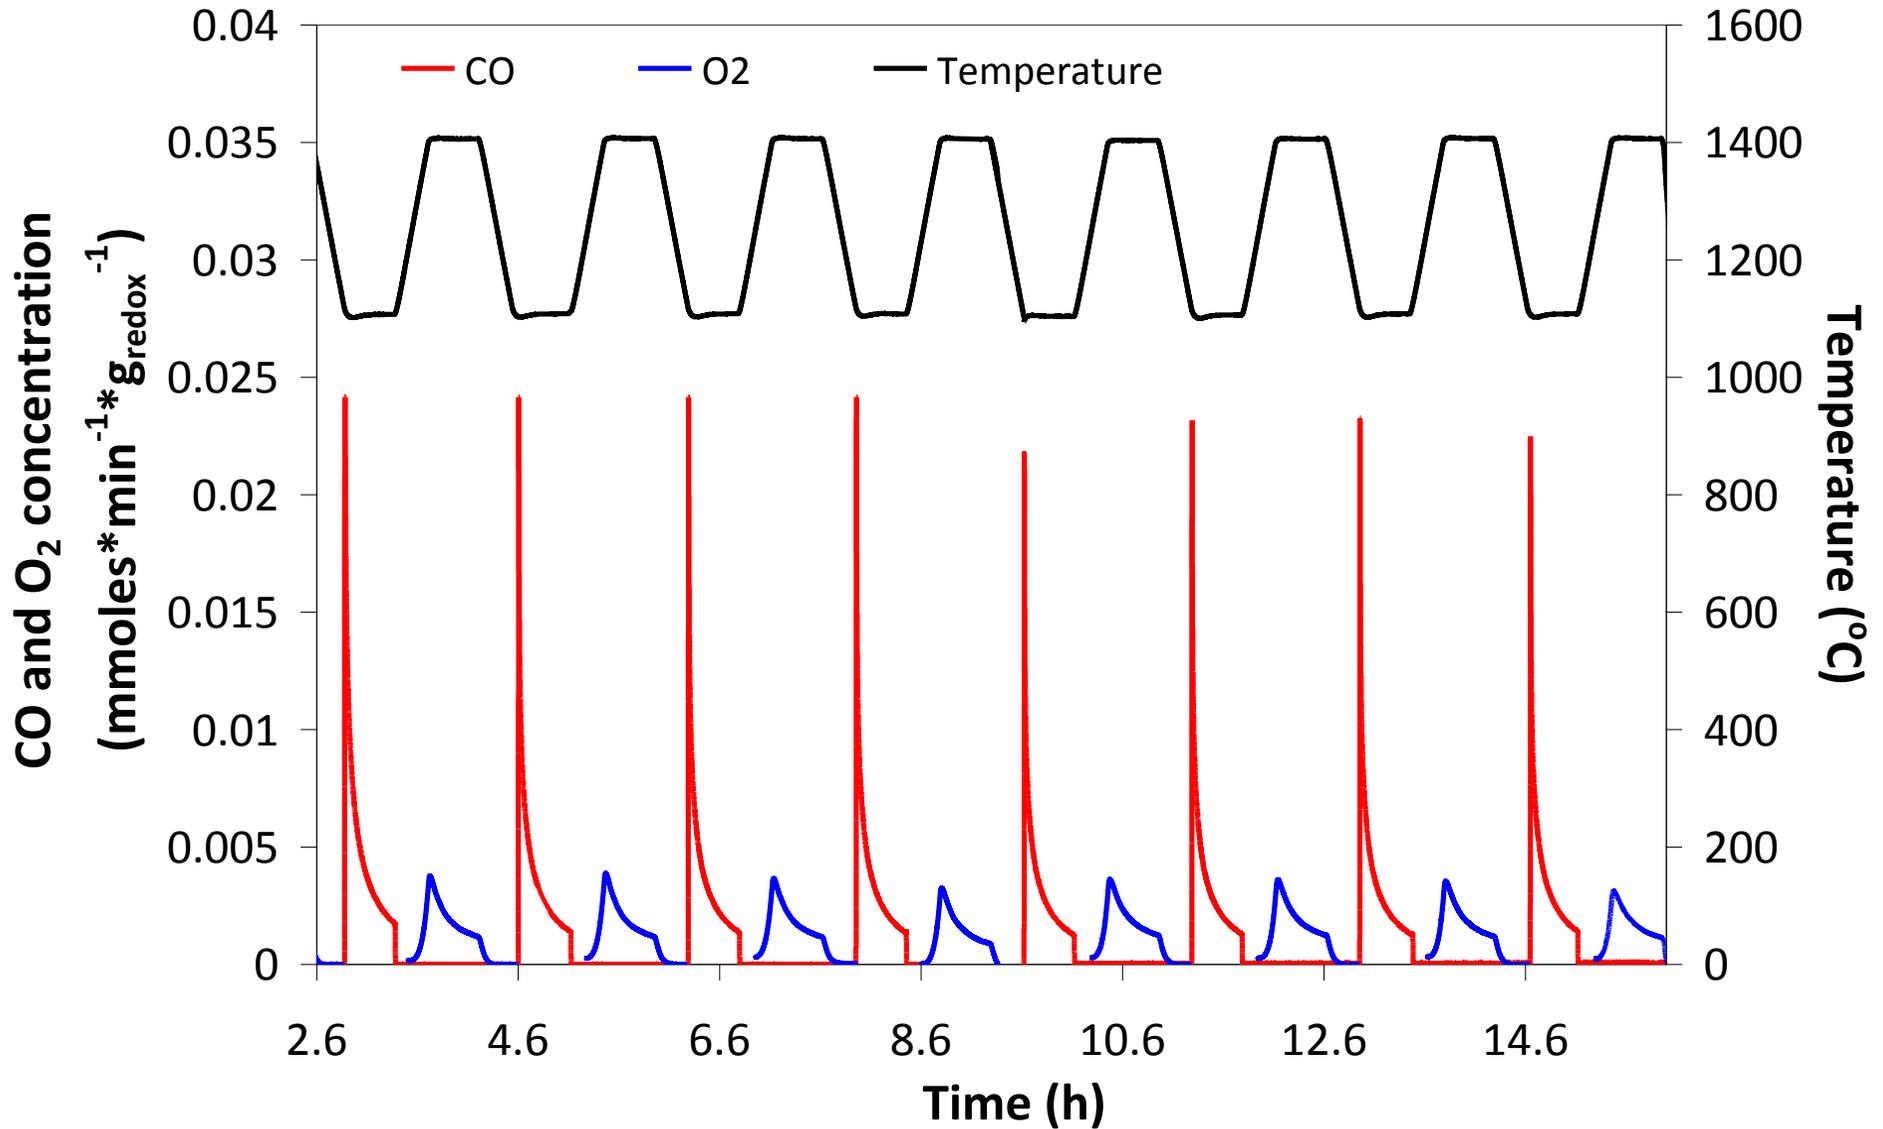

CO<sub>2</sub> splitting

thermal reduction

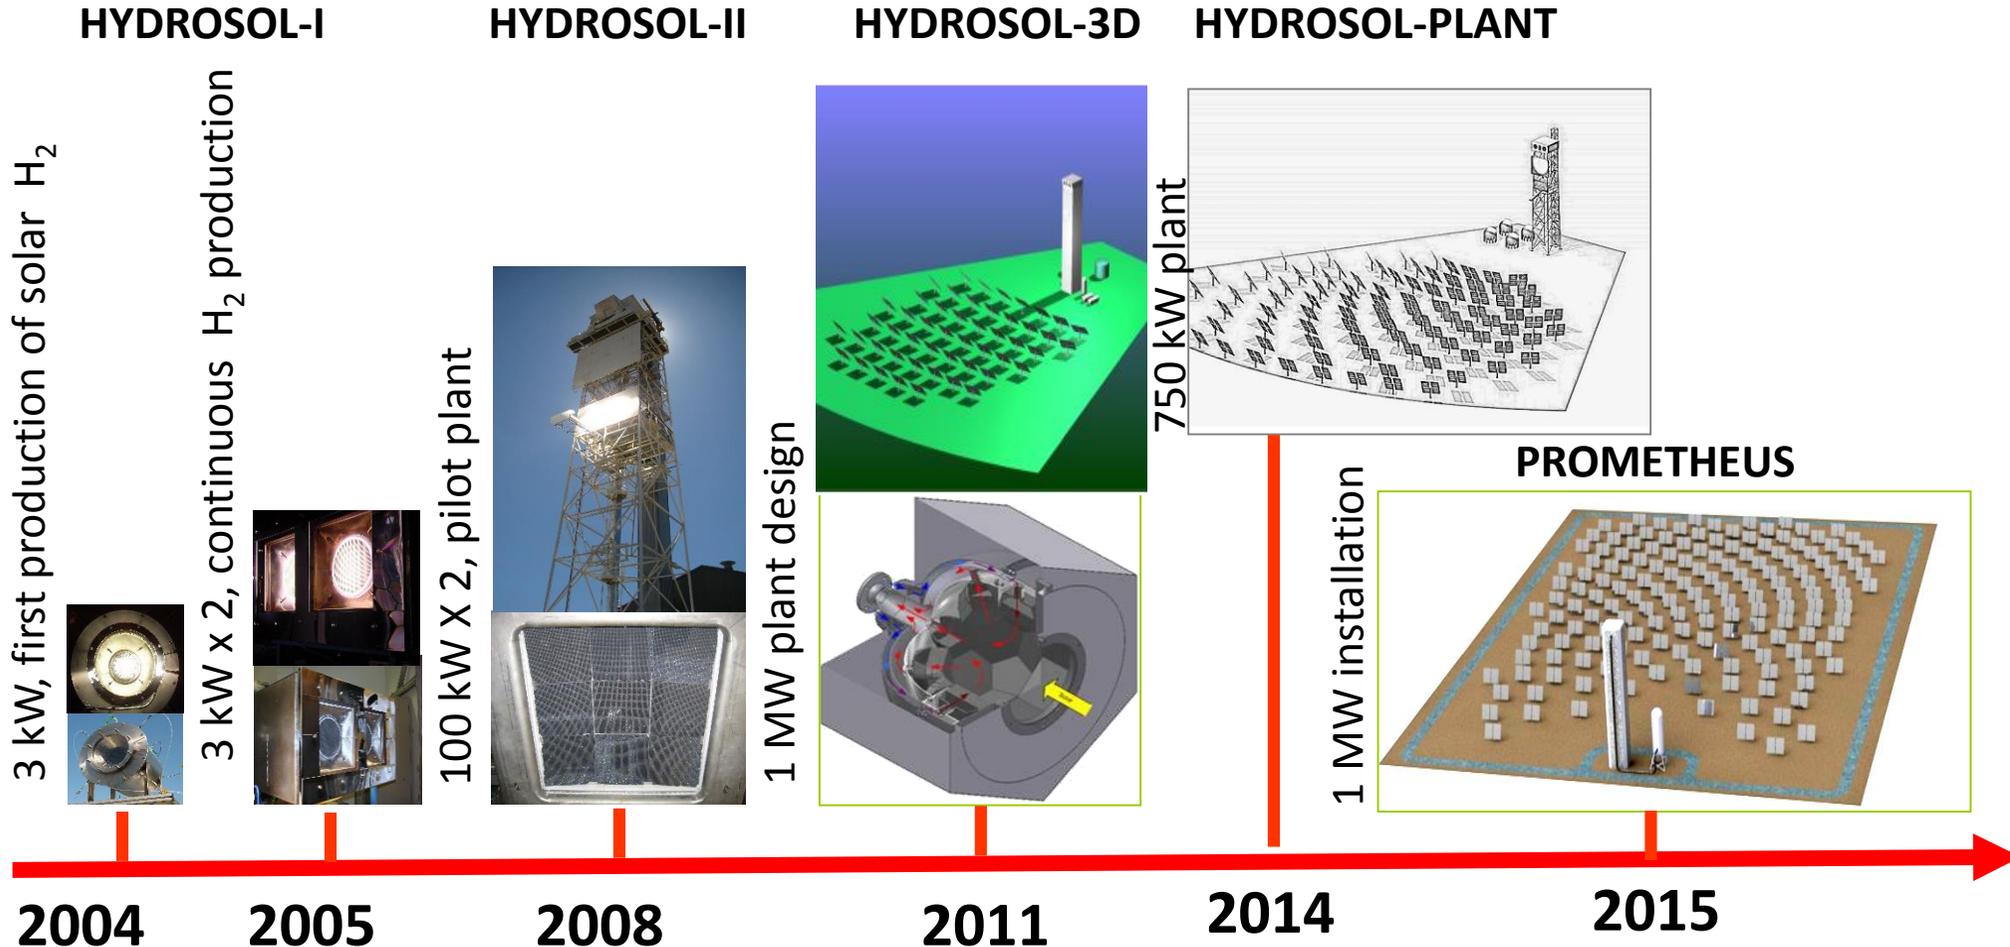

# Cycling Process

Reactant gas concentration: 100% CO<sub>2</sub>

# Helionomics – Solar to Liquid (STL) Fuels

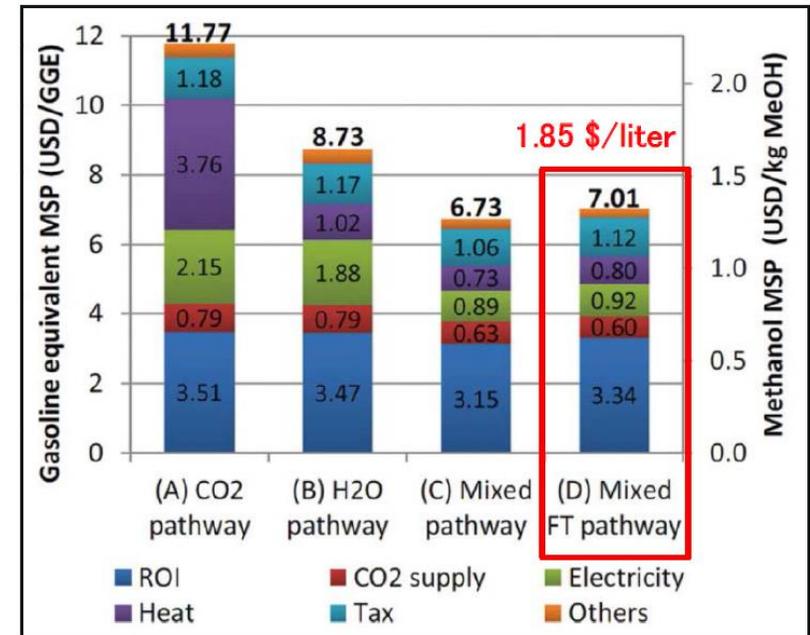

ICAO UNITING AVIATION

## STL - Economics

- Economics dominated by large investment cost and cost of capital
  - Mainly due to collection of solar energy and interest
    - =>Thermochemical efficiency decisive
- A path efficiency of ~10% is assumed to be required for economic viability
- Own calculations: Production costs of 1.3-2.9 \$/l (publicly owned facility)

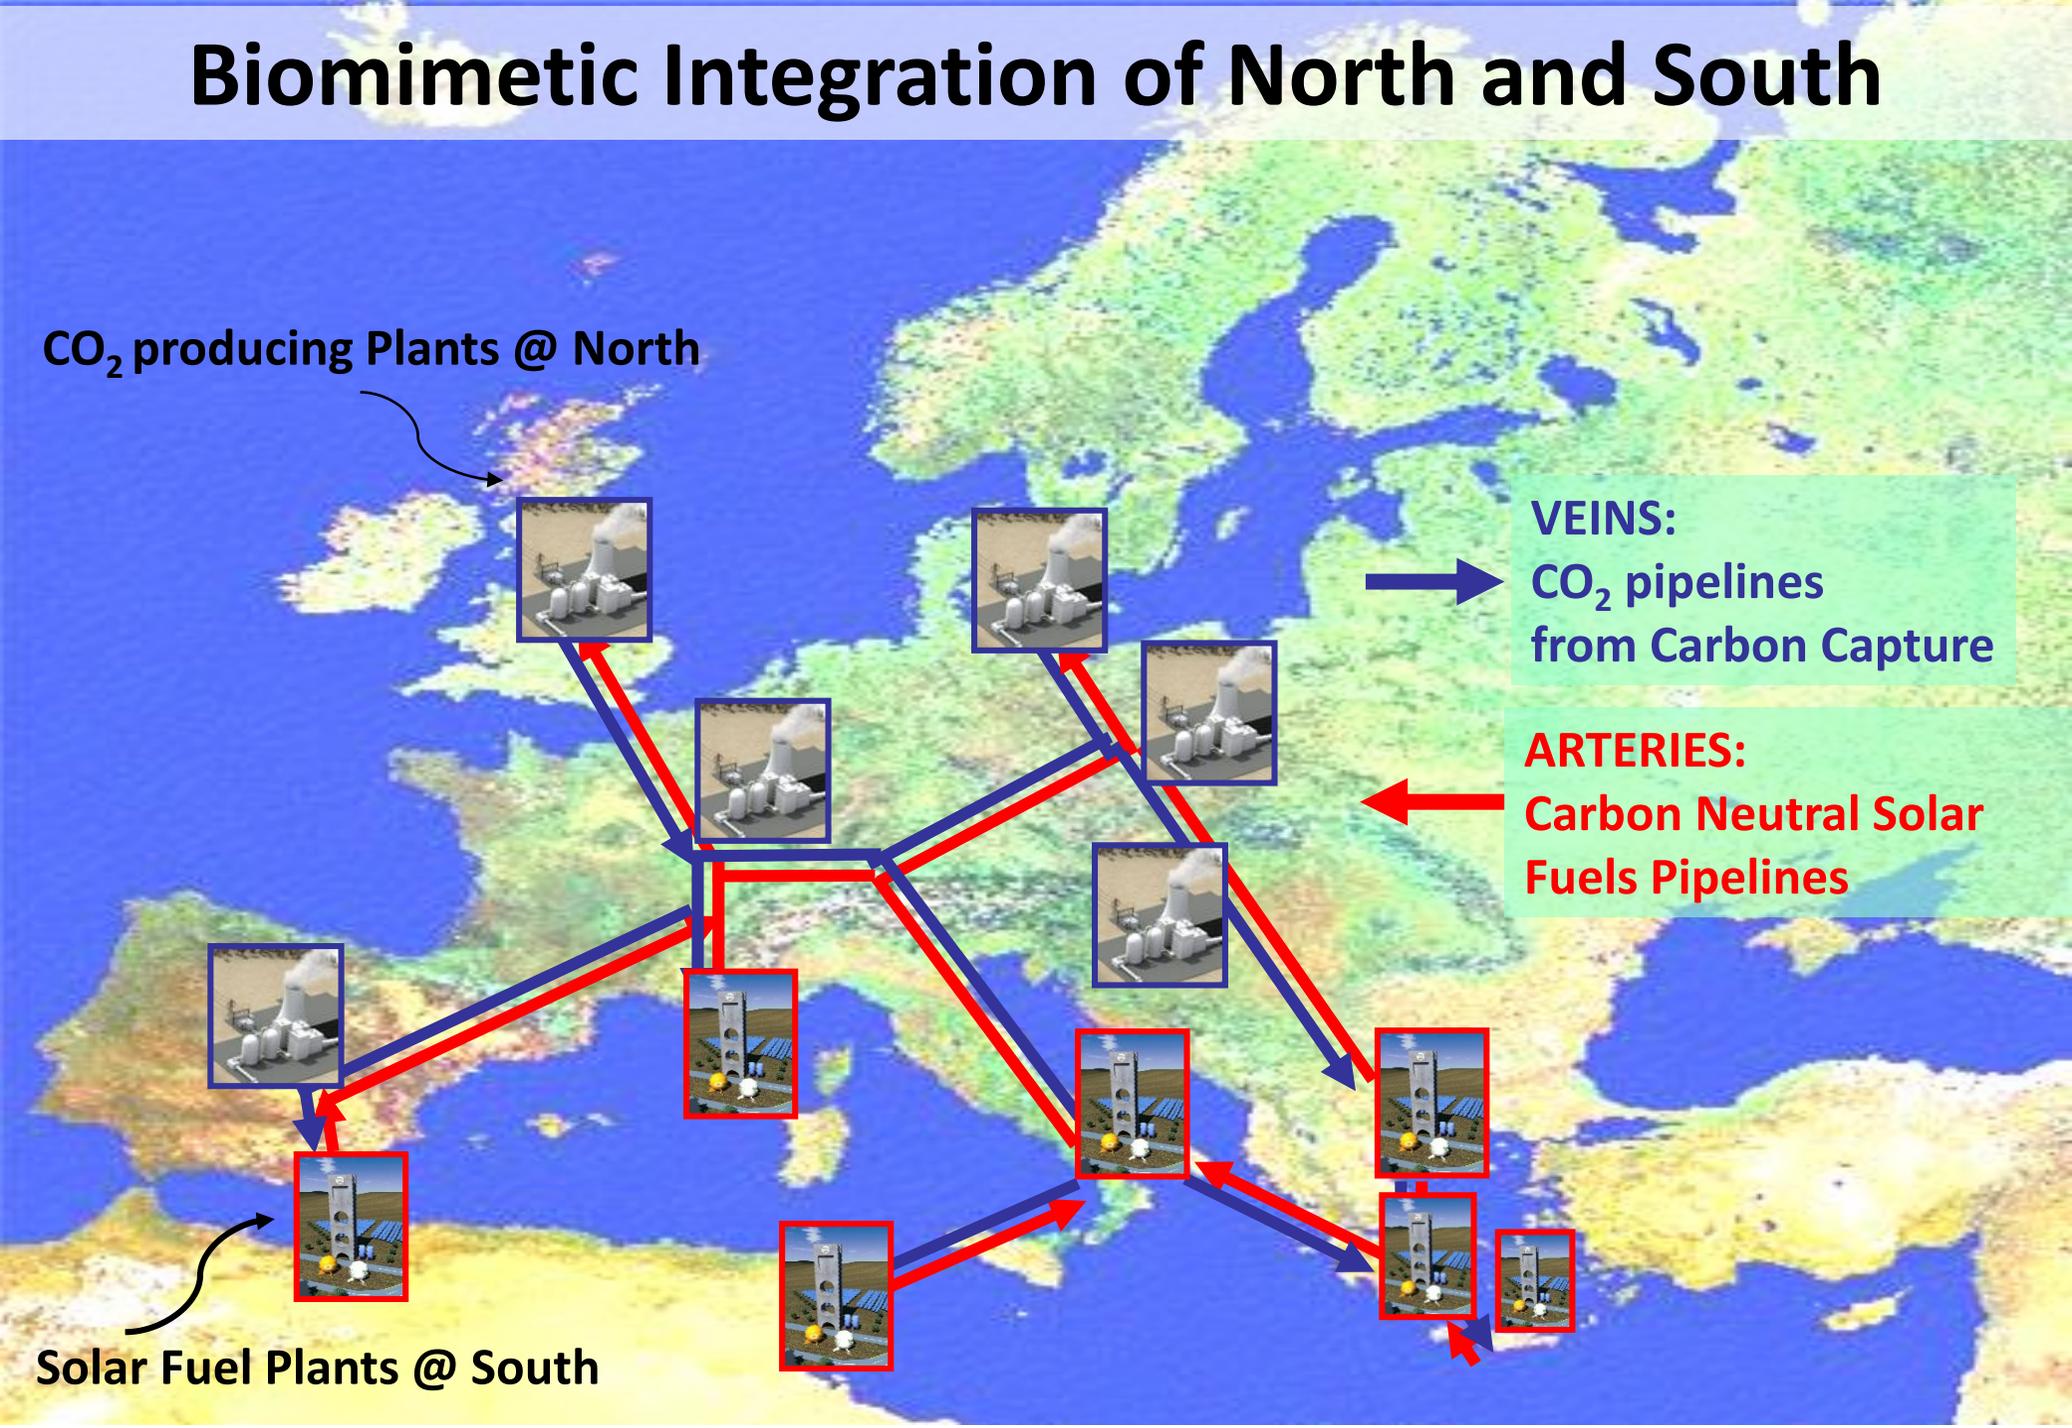

# Biomimetic Integration of North and South

CO<sub>2</sub> producing Plants @ North

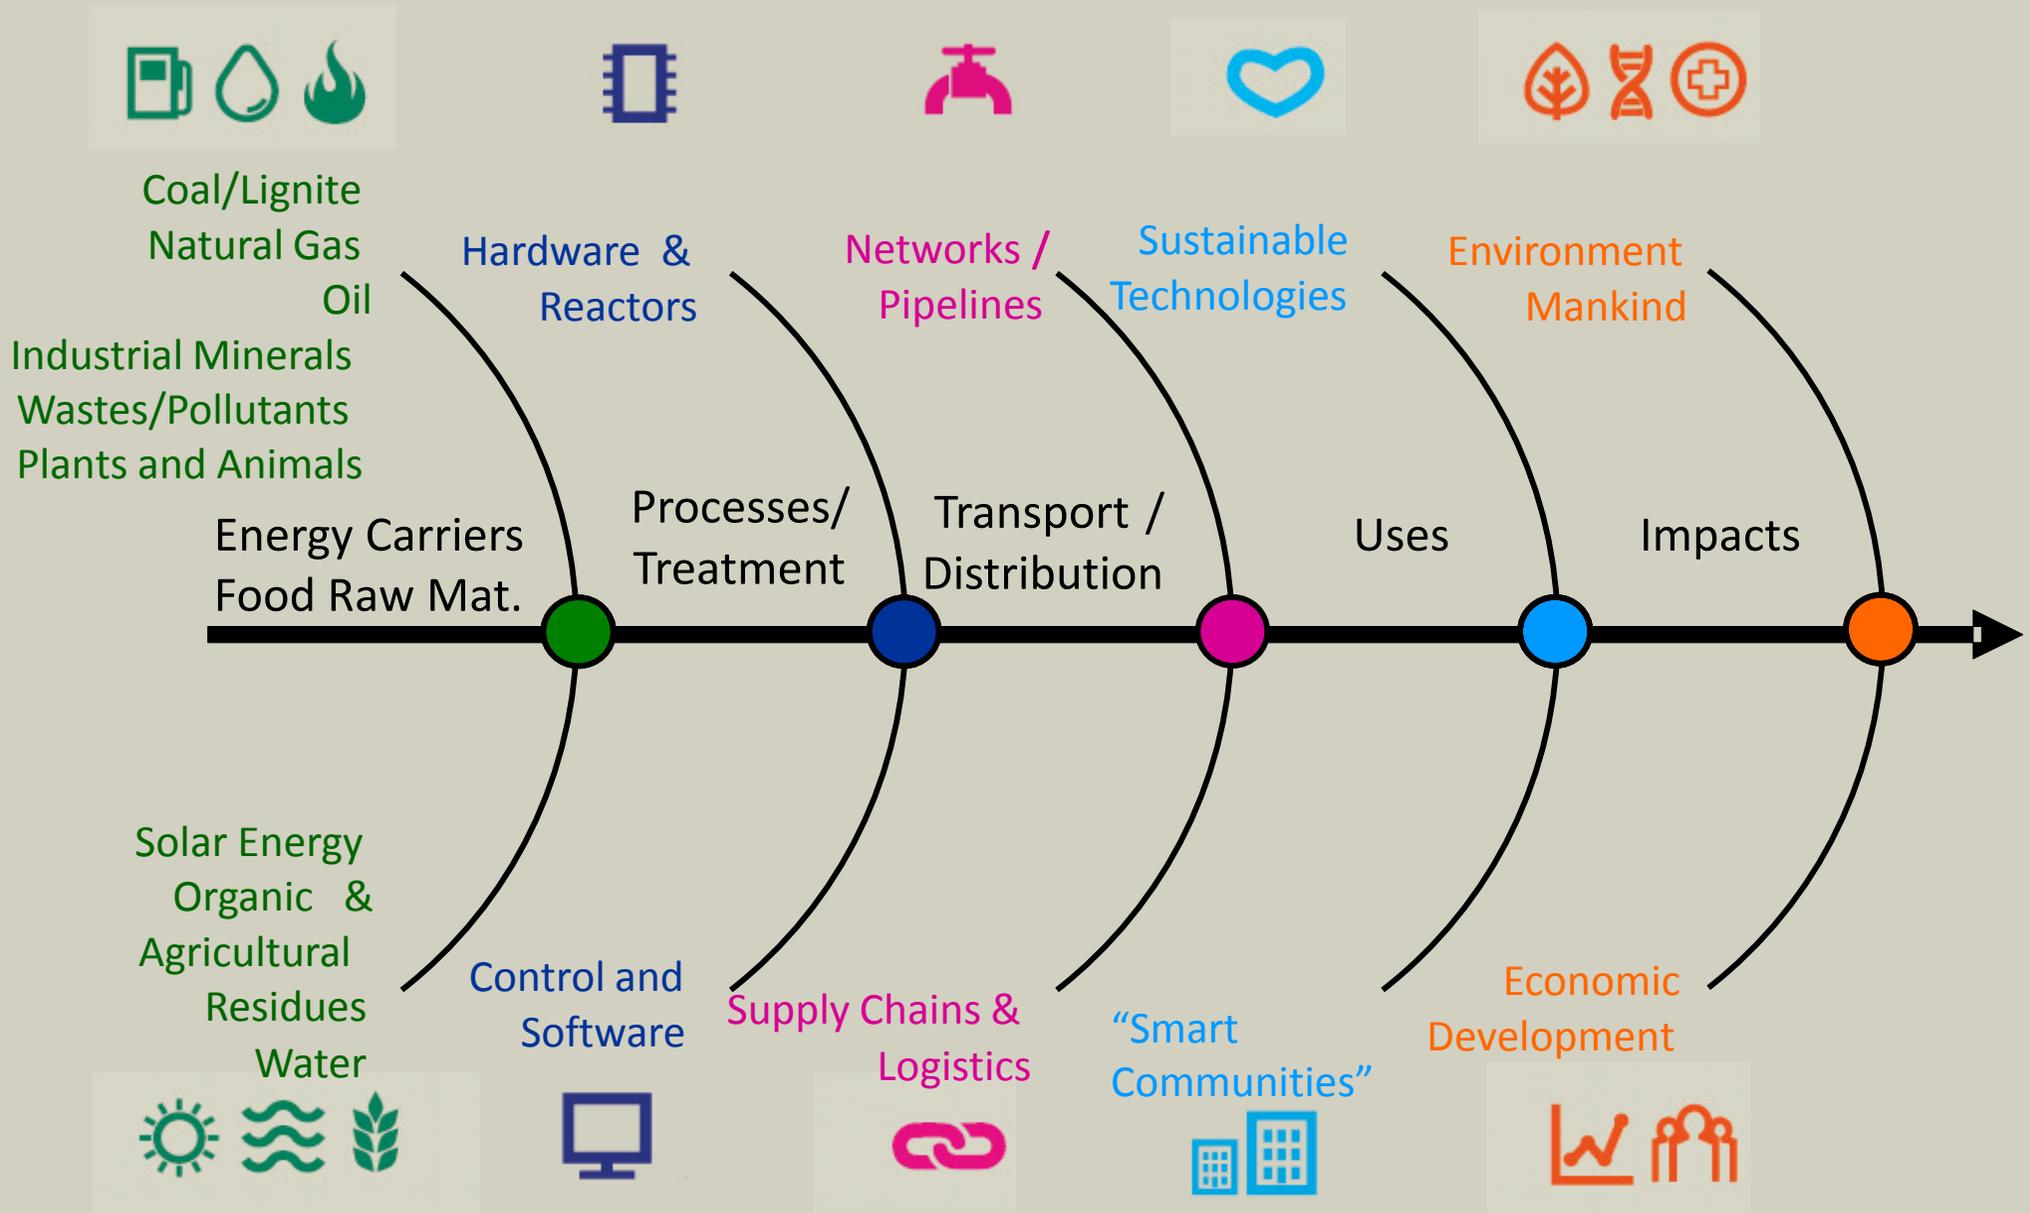

**VEINS:**  
CO<sub>2</sub> pipelines  
from Carbon Capture

**ARTERIES:**  
Carbon Neutral Solar  
Fuels Pipelines

Solar Fuel Plants @ South

## Solar Cracking of H<sub>2</sub>S

## Solar Steam Reforming of H<sub>2</sub>S

# Energy Corridor between Emirates-EU

# Acknowledgments

- **The European Commission for supporting our research in combustion engines and their emissions** through >24 projects over the last 18 years including projects APT-STEP, CLEANER-D, HCV and our partners in these projects.
- **The European Commission for supporting our Hydrogen and Solar Fuels research** with >16 projects including projects ARMOS, RESTRUCTURE, STORRE, NEMESIS2+, ARTIPHYCTION, BIOROBUR, EU-SOLARIS, HYDROSOL-3D and our partners in these projects
- **The Greek Secretariat for Research and Technology** for supporting our research through projects HYDROSOL+ and NANOREDSOL.
- **Past and Current Industrial Partners including** Molycorp, Tenneco, Ividen, Honda, CR Fiat, AVL
- **Our colleagues at APTL**
